

PSTricks Export

Here are the rules for PSTricks export:

- You need an updated Latex distribution. (In particular, all pstricks packages)
- A word on transparent colors: To use transparent colors (such as in polygons, angles, Lower and Upper Sums...), you need to compile your `tex` file with the following sequence:

`LATEX+DVIPS+PS2PDF`

The Postscript format doesn't support the transparent colors, that's why you must output through PDF.

Last thing: the program PS2PDF's version must be greater or equal to 1.4
